To Whom It may concern:

I am writing to you in support of Hydraway drainage systems. My landscape architectural practice has been involved in two recent athletic field renovation projects at Louisiana State University in Baton Rouge, Louisiana.

In the Summer of 2007, we were retained to design a new sub-surface drainage system for the LSU lady softball facility, Tiger Park. The system has performed as advertised since the day it was installed. Last week, the Baton Rouge area received over six inches of rain in one hour on Thursday, May 15th. Nevertheless, LSU was able to host the Southeastern Conference softball tournament at Tiger Park on Friday afternoon.

We are currently in the excavation phase of our next project at LSU's Soccer facility. Again, we are using Hydraway products and expect them to perform exceptionally. Other recreation fields in the area that have Hydraway drainage systems are LSU's Tiger Stadium, home of the 2007 National Champions and Zephyr Field in New Orleans, Louisiana.

I can recommend this product without hesitation. It performs as advertised and the Hydraway team provides quality products and excellent services to the design and installation professionals.

Sincerely,

ROY T. DUFRECHE & ASSOCIATES, LLC
